Sustainability
BRASSLAND

S u s t a i n a b i l i t y

To us, sustainability is about economic success, the safety and development of employees, environmental stewardship, and social progress. This way, BRASSLAND translates sustainability into a benefit for all our stakeholders.

BRASSLAND strategy is centered on four main pillars: our responsibility in the workplace, in the marketplace, towards the environment and towards society. Our sustainability efforts and activities are therefore focused in such a way that balanced consideration is given to the interests of all respective stakeholders, including employees, customers, shareholders, partners, local governments and the communities in which we are active.

Sustainable manufacturing requires an ongoing process of improvement, a process which we continue to pursue in the next years. BRASSLAND CSR report is based on the GRI (Global Reporting Initiative) Sustainability Reporting Standards. In response to growing interest throughout the supply chain to report on the carbon footprint of operations and logistics, BRASSLAND also participates in the Climate Change and Supply Chain questionnaires of CDP (formerly known as the Carbon Disclosure Project).

We firmly believe that our range of products and services meets the expectations of our customers in this respect. Our solutions are clearly aimed at improving efficiency in every single project. We remain resolute in pursuing that aim in the coming years. It is our ambition to offer our customers the best possible services at competitive prices – services that reduce costs and promote sustainability. In other words, we strive to be a competent and highly effective partner who excels through innovative and forward-looking solutions, the highest quality standards, and customer proximity.

To promote greater awareness of environmental issues, we have defined various requirements for our suppliers based on the ISO 14001 series of environmental standards. These environmental standards are designed to maintain a continuous improvement process. For BRASSLAND this primarily means that we carefully scrutinize the production processes. We look very closely at the product design, especially the surface treatment. We also check whether the packaging meets ISO standards and we promote the use of recyclable materials. In addition, BRASSLAND is committed to optimizing the transport streams, which in turn reduces energy consumption.

We are committed to making targeted investments and updating to latest machineries and technologies that strengthen our long-term growth. We strive to continuously modernize our product and services portfolio and adapt to new challenges.
